

WHAT IS CLAIMED IS:

1. A one-touch cap for fixing a control cable end to a plate-like bracket having a U-shaped slot inside of which is provided with a stepped latching part in a detachable manner; said one-touch cap comprising:

- (a) a tubular body having a cable fixing part for fixing a cable end;
- (b) a first flange to be engaged with one surface of the bracket and a second flange to be engaged with another surface, both flanges being provided on the outer surface of the body with interval; and
- (c) an elastic piece being provided between the first and second flanges; and having a base portion connected to a bottom of the body, an outer surface provided with an engaging claw to be engaged with the stepped latching part of the bracket, and a free end extending upward.

2. A one-touch cap according to claim 1, further comprising:
a guide part provided between the first flange and the second flange and mates to an inside surface of the U-shaped slot,
wherein the guide part is axially shifted from the elastic piece.

3. A one-touch cap according to claim 1, wherein,
the bracket has a second stepped latching part;
the elastic piece has a hook block in addition to the engaging claw;
the hook block is located near the bottom of the elastic piece and is capable of engaging with the second stepped latching part; and
an engagement of the hook block with the second latching part leaves some engaging even elastic piece is in the state of a elastic deformation where the engaging claw is been released.

4. A one-touch cap according to claim 1, further comprising a lock piece detachably inserted between the elastic piece and the body.
